

Powermix

Product information

Typical application: Mooring

Generally: Due to a technically reinforced composition of high tenacity superdan and polyester yarns has retained its superior strength. When combined with a unique double construction cover yarns, this composition provides superior abrasion resistance compared to conventional constructed ropes.

Fiber Content: Superdan and Polyester fiber

Specific Gravity: 0.99 (Float)

Melting Point: 165°C/265°C

Water Absorption: 0~1%

Elongation at break: 18~20%

According to INTERTANKO:s and OCIMF:s guidelines

Rope construction: 8-strand (4x2)
